

SYSTEM 10:
3-Way up front...
3 subs in the back.

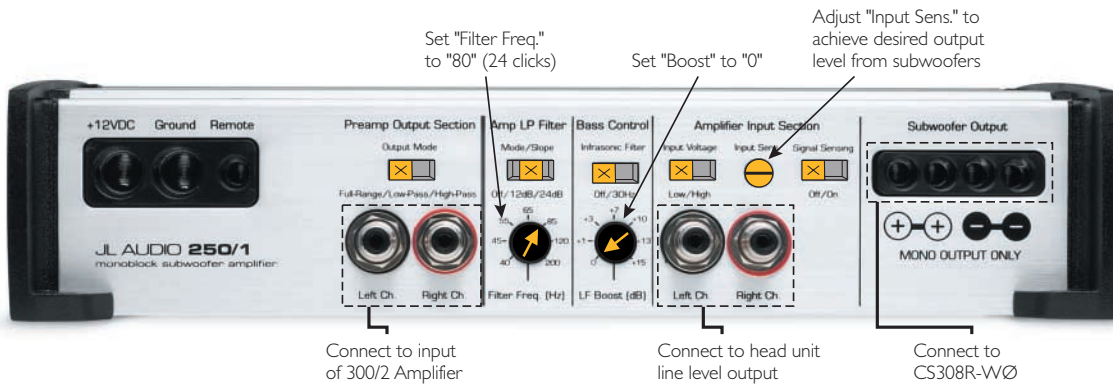

To complement the phenomenal sound quality of our XR653-CS 3-way component system, we've chosen a CS308R-WØ, which takes up little space and packs surprising power and bass quality.

A 250/1 monoblock drives the subwoofer system and passes signal from the head unit to the inputs of the 300/2 chosen to drive the 3-way components.

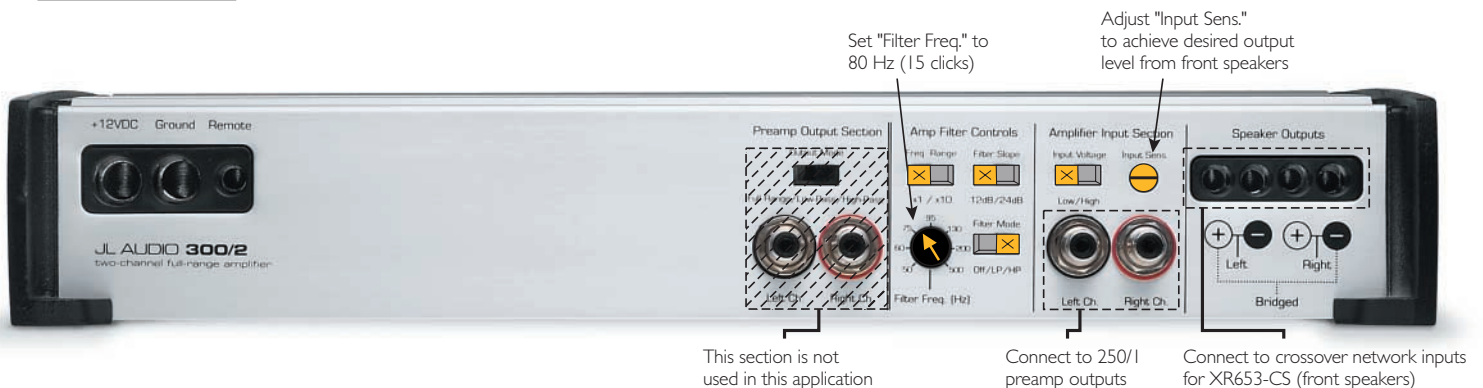

This system's balance of power is set up for sound quality listening, with ample headroom for the front system, which helps ensure killer dynamics and accurate reproduction.

This system could also be connected to the head unit in four-channel mode (front and rear line level outputs) to allow for subwoofer/satellite balancing from the front of the car.

Recommended initial amplifier settings for this system...

☞ ☒ ☛ = POSITION

Note: These settings are intended as a "baseline" for tuning this system. Depending on the vehicle and the customer's tastes, some variation in the crossover and bass control settings may be necessary for optimum performance.
